

Software Requirements Specification (SRS)

E-Commerce Order Management System (Meesho-Based)

Functional Requirements

FR1 – User Registration and Login

- Users should be able to create an account using a mobile number or email.
- OTP verification should be supported.
- Secure login should be available.

FR2 – Product Management

- Sellers can add, edit, or remove products.
- Product details should include images, description, price, category, and stock quantity.

FR3 – Product Search

- Customers should search products by keyword.
- Filters such as category, price range, brand, and ratings should be available.

FR4 – Shopping Cart

- Customers can add multiple products to the cart.
- Products can be removed or quantity can be modified before checkout.

FR5 – Order Placement

- Customers can place orders using available payment methods.
- The system should generate a unique Order ID.

FR6 – Payment Processing

- Support UPI, Debit Card, Credit Card, Net Banking, Wallets, and Cash on Delivery.
- Payment status should be recorded automatically.

FR7 – Order Tracking

- Customers should view the current status of their order.
- Order stages include:

- Order Confirmed
- Packed
- Shipped
- Out for Delivery
- Delivered

FR8 – Inventory Management

- Product quantity should reduce automatically after a successful order.
- Sellers should receive alerts when stock becomes low.

FR9 – Order Cancellation

- Customers can cancel orders before shipment.
- Refunds should be initiated automatically for prepaid orders.

FR10 – Return and Refund

- Customers can request returns within the allowed return period.
- Refund status should be visible until completion.

FR11 – Notifications

The system should notify users through SMS, email, or app notifications for:

- Order confirmation
- Payment confirmation
- Shipping updates
- Delivery confirmation
- Refund completion

FR12 – Reports

The system should generate reports including:

- Daily Orders
- Monthly Sales
- Revenue
- Returned Orders
- Best Selling Products

Non-Functional Requirements

Performance

- Pages should load within **3 seconds** under normal conditions.
- The system should support thousands of users simultaneously.

Security

- User passwords should be encrypted.
- Secure payment gateway integration should be used.
- OTP verification should prevent unauthorized access.

Reliability

- System availability should be at least **99.9%**.
- Data should not be lost during failures.

Scalability

- The application should support increasing numbers of customers, products, and sellers without major changes.

Availability

- The system should be available **24×7** except during scheduled maintenance.

Usability

- The interface should be simple and easy for users of all age groups.
- Navigation should require minimal learning.

Maintainability

- New features should be added without affecting existing functionality.
- Bugs should be fixed with minimal downtime.

Compatibility

- The application should work on Android, iOS, Windows, and modern web browsers.

Backup and Recovery

- Order and payment data should be backed up regularly.
- Data recovery should be possible after system failure.

6. Assumptions

- Users have internet connectivity.
- Sellers maintain accurate inventory information.
- Payment gateways are available during transactions.
- Courier services update shipment information regularly.

7. Constraints

- The system depends on third-party payment gateways.
- Delivery timelines depend on courier partners.
- Return policies vary based on product category.
- Government tax regulations must be followed.

8. Expected Benefits

- Faster order processing.
- Better inventory management.
- Improved customer satisfaction.
- Reduced manual work.
- Increased sales through efficient order handling.
- Easy monitoring of business performance.
